## Drywall Repair & Installation

Simple overview • 1–2 pages • Homeowners • Property managers • Small businesses

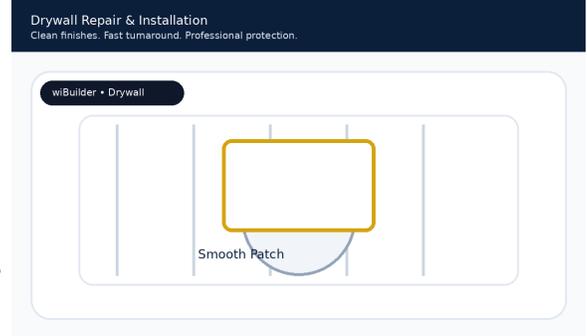

**Fast, clean, paint-ready drywall work** for holes, cracks, water damage, remodel openings, and full-room installs.

We match texture and blend repairs so walls and ceilings look uniform—without messy overspray or dust everywhere.

### Common jobs

- Patch holes from anchors, doors, or plumbing/electrical access
- Repair stress cracks and nail pops
- Water damage cut-out + replacement (after leak source is fixed)
- Drywall install for remodels, additions, garages, and offices
- Texture matching (orange peel, knockdown, smooth) + paint prep

**Typical timing:** Many repairs take 1–2 visits because joint compound needs drying time between coats.

Repair types	Installation	Protection
<ul style="list-style-type: none"><li>• Small holes &amp; dents</li><li>• Medium/large patches</li><li>• Ceiling cracks &amp; corners</li><li>• Water damage sections</li><li>• Garage drywall &amp; fire tape</li></ul>	<ul style="list-style-type: none"><li>• Hang, tape, mud</li><li>• Corner bead &amp; trims</li><li>• Texture options</li><li>• Prime-ready finish</li><li>• Coordinate with painting</li></ul>	<ul style="list-style-type: none"><li>• Floor &amp; furniture covering</li><li>• Dust control plan</li><li>• Clean-up after each day</li><li>• Respectful on-site behavior</li><li>• Photo documentation (optional)</li></ul>

### Our process

<b>1) Quick assessment</b>	Photos + basic measurements help us quote faster. Larger projects may need a walk-through.
<b>2) Protect + prep</b>	Cover floors, isolate area if needed, and set expectations for drying time.
<b>3) Repair / install</b>	Patch or hang drywall, tape, and apply coats for a flat finish.
<b>4) Texture + paint-ready</b>	Match texture or create a consistent finish, then prep for primer/paint.
<b>5) Clean up + review</b>	Tidy the space and confirm the result meets expectations.

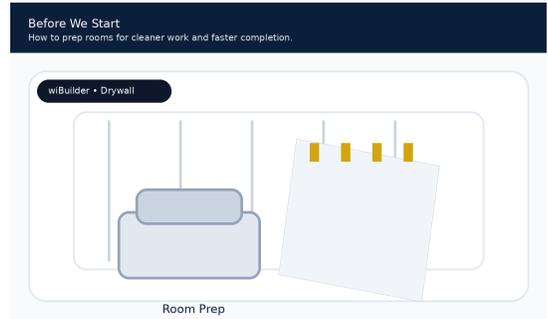

## How to prepare your space

A little prep helps us work faster and keeps dust to a minimum.

- Move small items off nearby surfaces.
- Clear a **6–8 ft** work zone if possible.
- Secure pets in another room during work hours.
- For water damage: confirm the leak source is fixed first.
- Point out alarms, sprinklers, sensors, or special fixtures near the work area.

**Optional:** Share paint color/finish if you want painting included.

<p><b>Texture match?</b> We blend common textures. Exact matches can vary with paint layers &amp; lighting.</p>	<p><b>Painting included?</b> Usually <b>paint-ready</b>. Painting can be added or coordinated.</p>
<p><b>Dust control?</b> Coverings + daily cleanup. Some sanding dust is normal.</p>	<p><b>Ceilings?</b> Yes—cracks, seams, water damage, patches around vents/lights.</p>

## What affects price

- Size and number of repair areas
- Ceiling height and access (stairs, vaulted ceilings)
- Texture complexity and blending area
- Water damage scope (must be dry and safe)
- Whether painting is included
